

Transitioning
from reactive
snapshots to
**Continuous
Assurance**

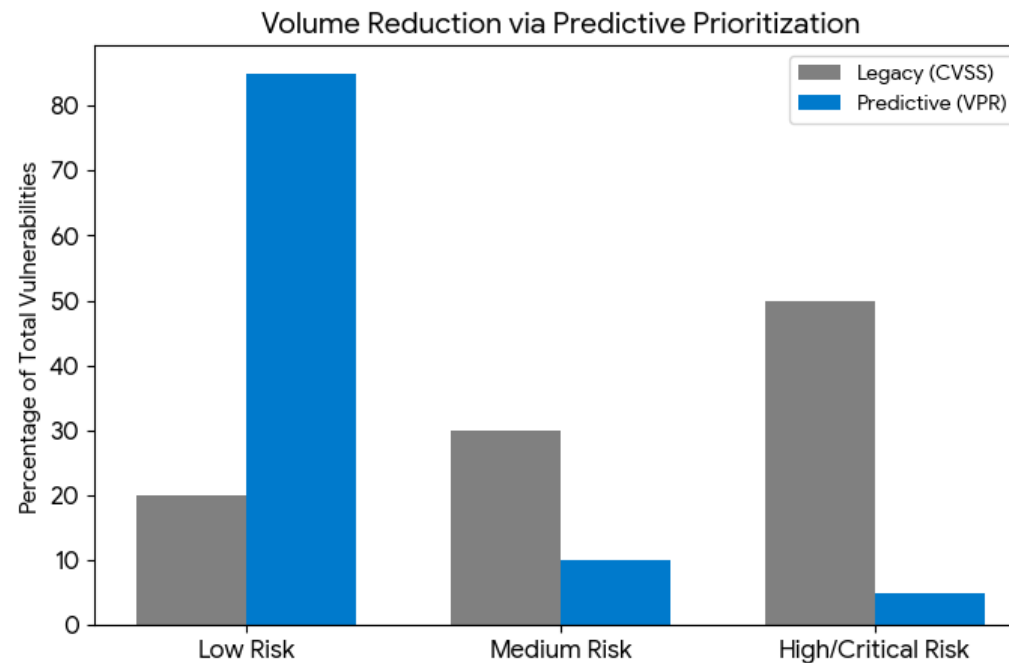

The Multi-Cloud Defensive Architecture

Cannot resolve/reach
without Hub Tunnel

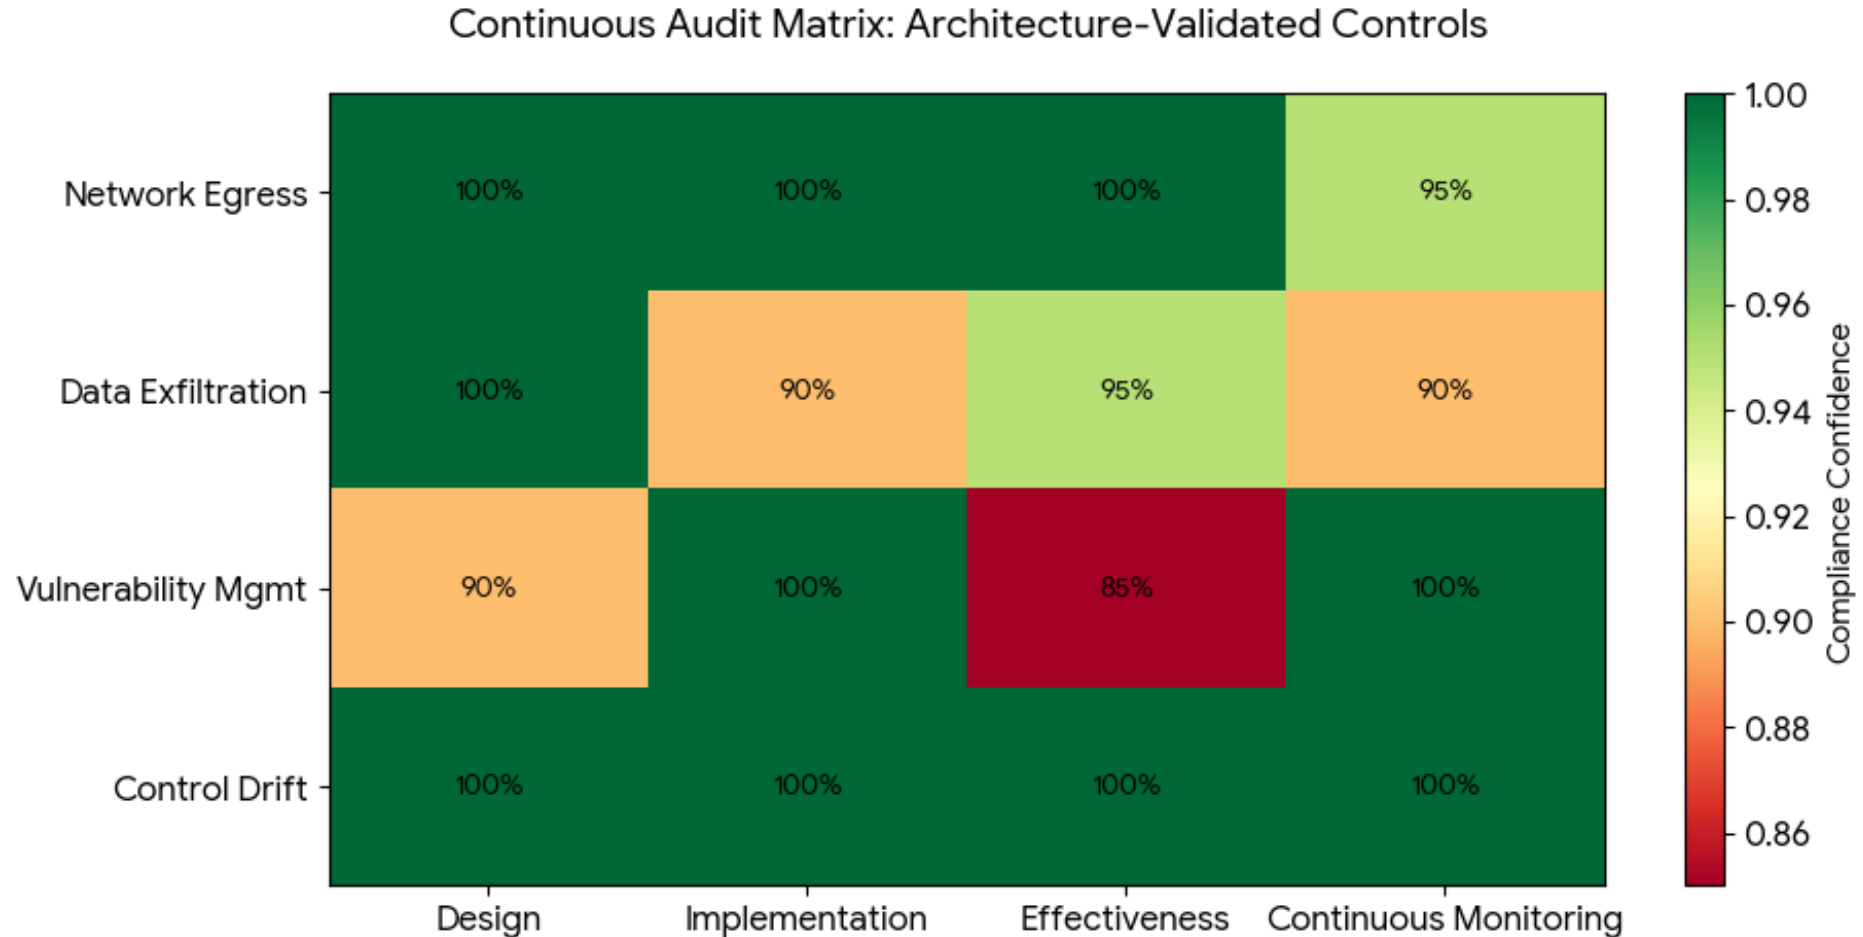

Predictive Risk Management (Tenable VPR)

Key Concept: Prioritizing the **1.6% of vulnerabilities** that pose a real-world threat.

The graph demonstrates how VPR reduces "High/Critical" noise, allowing teams to hit the **remediation SLA**.

Continuous Audit Matrix

Egress Integrity & Data Exfiltration Protection

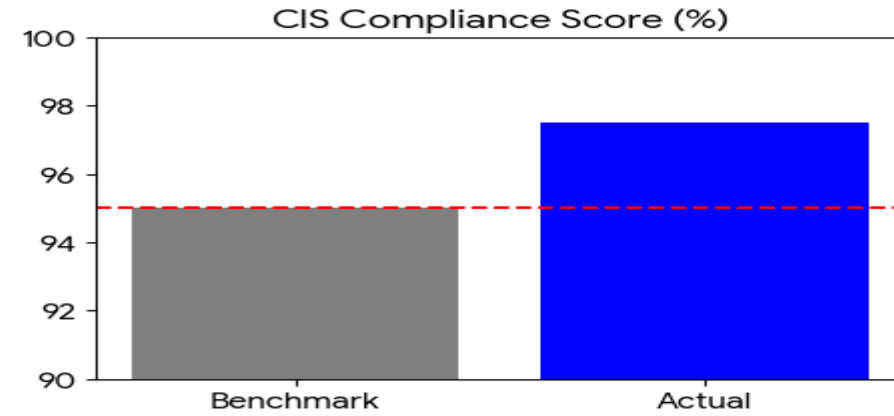

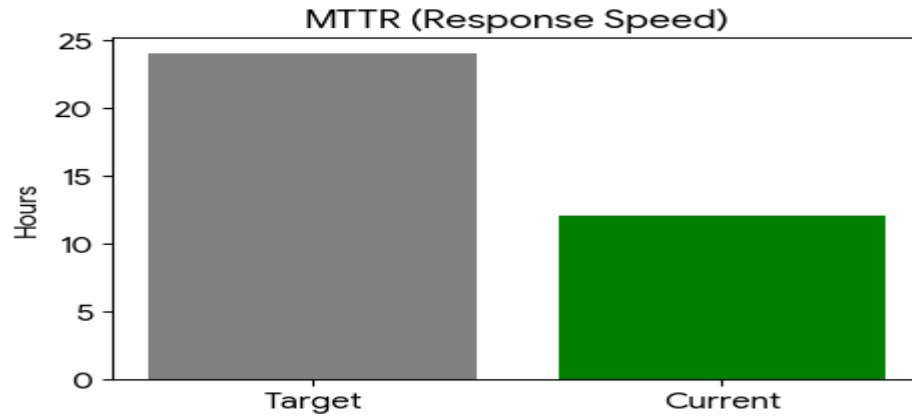

Key Concept: Identity-aware **FQDN filtering** and Cloud DLP via Cisco SASE.

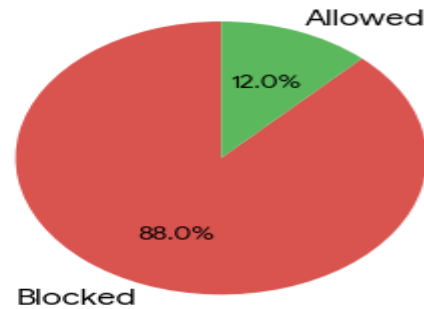

SASE Framework where DNS-layer security acts as the primary barrier against data exfiltration to unauthorized financial domains or C2 servers.
